

Pull Request Overview

Comprehensive analysis of open pull requests across personal repositories
and upstream open-source contributions.

User: euxaristia · **Org:** Cairn

Date: May 12, 2026 · **Open PRs:** 19

Pull Request Status Report

GitHub: [euxaristia](#) / Cairn Organization

This report provides a comprehensive overview of all open pull requests associated with the GitHub user **euxaristia** across personal repositories and upstream contributions, as well as any open pull requests within the **Cairn** organization. The data was collected on **May 12, 2026** using the GitHub public API. The report is designed to help track contribution velocity, identify stale PRs that may need follow-up, and highlight key areas of active development work.

Metric	Count
Open PRs authored by euxaristia	19
Open PRs in Cairn organization	0
PRs involving euxaristia (non-author)	2
Total personal repositories	59
Cairn organization repositories	1

Table 1: Summary of pull request metrics for euxaristia and Cairn

Open Pull Requests Detail

The following table lists all 19 open pull requests authored by euxaristia, sorted by creation date in descending order. These span personal repositories, forks, and upstream contributions to major open-source projects. All repository names use the full owner/repo format.

Repository	PR	Title	Created
euxaristia/gemini-cli	#4	fix(build): detect Bun runtime in build scripts	May 12, 2026
euxaristia/gemini-cli	#3	fix(core): make shell tool work under Bun	May 12, 2026
euxaristia/gitee-cli	#2	feat: implicitly use current repo and branch context for pr commands	May 9, 2026
euxaristia/colt	#5	fix(editor): typing/pasting "(" now actually inserts the character	May 9, 2026
euxaristia/colt	#4	feat: mouse click moves cursor; drag enters Visual mode	May 7, 2026
google-gemini/gemini-cli	#26498	feat(cli): show acknowledgment when user steering hint is processed	May 5, 2026

Repository	PR	Title	Created
anomalyco/opencode	#25355	fix(tui): bind home/end to line start/end in input	May 1, 2026
google-gemini/gemini-cli	#26280	fix(build): detect Bun runtime in build scripts	Apr 30, 2026
euxaristia/VoxelPopuli	#4	Parallelize chunk generation across rayon worker pool	Apr 28, 2026
euxaristia/colt	#3	fix: prevent status bar from wrapping when narrower than its content	Apr 28, 2026
charmbracelet/glow	#937	fix: ensure closing fence in WrapCodeBlock is on its own line	Apr 26, 2026
euxaristia/VoxelPopuli	#2	chore(deps): replace image and rayon with smaller alternatives	Apr 22, 2026
euxaristia/colt	#1	feat(substitute): add regex support to ":s/" command	Apr 14, 2026
euxaristia/tree-sitter	#1	feat(runtime): pure-Rust runtime crate; port point.c	Apr 14, 2026
euxaristia/dotfiles	#1	feat: add protected-branch check to git safety rules	Apr 13, 2026
clockworklabs/SpacetimeDB	#4773	feat(bindings-cpp-ffi): add Rust FFI crate for WASM modules	Apr 10, 2026
QwenLM/qwen-code	#2838	feat: add bun runtime support	Apr 2, 2026
google-gemini/gemini-cli	#22618	fix(cli): respect ui.loadingPhrases "off" setting	Mar 16, 2026
microsoft/node-pty	#901	fix: swallow resize() errors after PTY exit on Windows and Unix	Mar 13, 2026

Table 2: All open pull requests authored by euxaristia, sorted by date (newest first)

Staleness Analysis

Understanding the age of open pull requests is critical for prioritizing follow-up actions. The table below categorizes each PR by age bracket as of the report date (May 12, 2026). PRs older than 30 days are flagged as potentially stale, as they may have accumulated merge conflicts or lost reviewer context.

Age Bracket	Count	Repositories
0-7 days	6	euxaristia/gemini-cli, euxaristia/gitee-cli, euxaristia/colt, anomalyco/opencode
8-30 days	8	euxaristia/colt, euxaristia/VoxelPopuli, charmbracelet/glow, euxaristia/tree-sitter, euxaristia/dotfiles, clockworklabs/SpacetimeDB, QwenLM/qwen-code
31-60 days (stale)	5	google-gemini/gemini-cli, QwenLM/qwen-code, microsoft/node-pty

Table 3: PR age distribution as of May 12, 2026

PRs Involving euxaristia (Non-Author)

In addition to the 19 PRs directly authored by euxaristia, two additional pull requests involve euxaristia as a commenter, reviewer, or referenced contributor. These may represent collaborative work, review requests, or issues where euxaristia provided input that shaped the contribution.

Repository	PR	Title
BingqingLyu/qwen-code	#73	feat: add bun runtime support
this-is-dev/InnerDemons	#9	y cant i merge?

Table 4: PRs involving euxaristia as a non-author contributor

Cairn Organization Status

The Cairn organization currently maintains a single repository: **Cairn/floriography**, a TypeScript project described as providing a random flower, its Latin name, and a verse from a real English poem. As of **May 12, 2026**, there are no open pull requests across the Cairn organization. All previous contributions have likely been merged or closed, or the project is in a stable state with no pending changes requiring review.

Key Themes and Analysis

Examining the distribution of open pull requests reveals several clear patterns in the types of work euxaristia is actively pursuing. These themes highlight both technical interests and the breadth of the open-source communities in which euxaristia participates.

Bun Runtime Compatibility

A significant cluster of PRs focuses on adding or improving Bun runtime support across multiple projects. This includes PR #4 and #3 on euxaristia/gemini-cli (May 12, 2026), PR #26280 on google-gemini/gemini-cli (Apr 30, 2026), and PR #2838 on QwenLM/qwen-code (Apr 2, 2026). This pattern suggests a strong interest in the Bun JavaScript runtime as an alternative to Node.js, with a focus on ensuring that build scripts, CLI tools, and shell integrations work correctly when executed under Bun rather than Node. The recurrence of this theme across independent projects indicates specialized

expertise that serves as reference implementations for other projects encountering similar issues.

colt Editor Development

The **euxaristia/colt** repository, a vi-style editor written in the Pony programming language, has four open PRs (#1 through #5) representing active feature development. The work spans regex substitution support in the ":s/" command (PR #1, Apr 14, 2026), visual mode improvements with mouse click and drag support (PR #4, May 7, 2026), character input fixes for parentheses insertion (PR #5, May 9, 2026), and status bar layout corrections (PR #3, Apr 28, 2026). This concentration signals that colt is the primary personal project receiving active development attention.

Upstream Open-Source Contributions

Several PRs target well-known upstream repositories, including google-gemini/gemini-cli, microsoft/node-pty, charmbracelet/gh, anomalyco/opencode, clockworklabs/SpacetimeDB, and QwenLM/qwen-code. These contributions demonstrate engagement with the broader open-source ecosystem. Notably, the PRs to microsoft/node-pty (#901, Mar 13, 2026, PTY resize error handling) and charmbracelet/gh (#937, Apr 26, 2026, markdown rendering fix) address fundamental cross-platform issues that benefit a wide user base. The diversity of target projects reflects broad technical fluency.

Systems-Level Rust Development

Three PRs involve Rust-focused systems work: the euxaristia/tree-sitter pure-Rust runtime (PR #1, Apr 14, 2026), euxaristia/VoxelPopuli chunk parallelization with rayon (PR #2, Apr 22 and PR #4, Apr 28, 2026), and clockworklabs/SpacetimeDB FFI bindings for WASM modules (PR #4773, Apr 10, 2026). These target low-level, performance-critical domains including parser runtimes, voxel engine optimization, and WebAssembly module interop. The tree-sitter contribution is particularly ambitious, involving a complete rewrite of the runtime in pure Rust to eliminate the C dependency.

Recommendations

Based on the current state of open pull requests, the following actions may help improve contribution effectiveness and ensure that ongoing work receives timely attention from maintainers.

1. Prioritize stale PRs: The oldest open PR (microsoft/node-pty #901, Mar 13, 2026) has been open for approximately 60 days. Consider following up with maintainers through a polite comment or by rebasing the branch onto the latest main to resolve any merge conflicts. PRs on google-gemini/gemini-cli (#22618, Mar 16, 2026) and QwenLM/qwen-code (#2838, Apr 2, 2026) are

also in the stale bracket.

2. Consolidate gemini-cli contributions: Three separate PRs target google-gemini/gemini-cli. If these changes are related (e.g., the Bun build detection fix appears in both PR #4 on the fork and PR #26280 upstream), consider consolidating them into a single, well-organized PR to reduce reviewer overhead and improve the chances of timely merge.

3. Continue colt editor momentum: The euxaristia/colt editor has the most active development pipeline with four open PRs. Maintaining a regular merge cadence will prevent the PR stack from growing unmanageably and will allow incremental user feedback on each new capability.
