Total Open	New / Closed	In Review	Stale
12	0 / 0	1	5

Changes Since Last Report (May 20)

No changes have occurred since the previous report. The same 12 pull requests remain open with identical states and no new PRs have been opened. No PRs were merged or closed. This marks a stable period in the open PR portfolio, with no net movement in either direction. The only notable change is incremental aging: microsoft/node-pty#901 has crossed the 68-day threshold, and charmbracelet/glow#937 has reached 24 days. All other PRs remain in their previously reported states.

PR Overview

All 12 open pull requests are listed below, sorted by most recently updated. The "State" column reflects the actual status determined by cross-referencing reviews, follow-up commits, and maintainer activity.

Detailed PR Analysis

[Reviewed] euxaristia/pcc#10: feat: add builtin linker and integrate into compiler pipeline

Created: May 19, 2026 | Updated: May 19, 2026 | Draft: False | Mergeable: True | +1695/-432 in 4 files

CI: PENDING | Reviews: 1 | Comments: 0 | Review Comments: 7 | Commits: 1

[Reviewed] euxaristia/adapt#4: feat(flatpak): run flatpak update on all upgrade paths

Created: May 17, 2026 | Updated: May 17, 2026 | Draft: False | Mergeable: True | +6/-1 in 1 files

CI: PENDING | Reviews: 1 | Comments: 0 | Review Comments: 1 | Commits: 1

[In Review Cycle] QwenLM/qwen-code#2838: feat: add bun runtime support

Created: April 02, 2026 | Updated: May 14, 2026 | Draft: False | Mergeable: None | +3434/-6 in 6 files

CI: PENDING | Reviews: 2 | Comments: 4 | Review Comments: 17 | Commits: 2

Human Reviews:

[CHANGES_REQUESTED] wenshao (April 24, 2026):

[CHANGES_REQUESTED] wenshao (April 24, 2026): The added `bun.lock` appears to be generated from stale or incomplete manifests. For example, it records `@lydell/node-pty` packages as `1.1.0` while the current manifests and npm lock use `1.2.0-beta.10`; workspace versions are also stale (`0.13.2` vs current `0.15.2`), channel workspace dependenci

Conversation:

DennisYu07 (April 03, 2026): Hi @euxaristia, thank you for your contribution! bun support is on our roadmap as a next-step feature. We'll conduct a thorough design review before merging this PR, so we'll need some additional time to evaluate it properly.

euxaristia (April 24, 2026): Ok I will fix these issues soon, my CachyOS bricked itself so I need some time to reinstall. I should be able to address the requested changes in a week or less.

euxaristia (April 24, 2026): Thanks for the thorough review, @wenshao. My machine is finally back, so I just pushed a rebased version that addresses most of the comments. Summary: | Comment | Fix | |---| | Root `version` / `sandboxImageUri` rolled back | Rebased onto current `main` (0.15.2 preserved). | | `package-lock.json`

euxaristia (May 14, 2026): Thanks for the thorough reviews, @wenshao. I've pushed a new commit that addresses all outstanding comments: **Round 2 fixes:** | Comment | Fix | |---| | `bun.lock` stale versions (`@lydell/node-pty` 1.1.0, workspace 0.13.2, missing channels, wrong `react-devtools-core`) | Regenerated `bun.loc`

Notable Feedback:

wenshao: **[Critical]** This rolls the root package version back to `0.13.2` while the base branch is already newer. The root version is used for `CLI\_VERSION` and embedded into the bundle, so this would ship/

wenshao: **[Critical]** `package.json` changes dependency versions, but `package-lock.json` was not updated. `npm ci` fails with lockfile mismatch errors for changed dependencies such as `cross-env`, `react-de

wenshao: **[Critical]** Changing the published CLI shebang to `#!/usr/bin/env bun` makes the installed `qwen` binary require Bun on `PATH`. That breaks existing Node-only installations even though the package

Conversation:

euxaristia (April 10, 2026): @codex review

bfops (April 27, 2026): Hi @euxaristia, what's the goal of this PR? Why is this version preferable to what's there? Is it intended as a replacement?

euxaristia (April 28, 2026): @bfops rewrites the C++ binding layer in Rust. The C++ side has integration tests (type-isolation, client-comparison) but zero unit tests on the internal logic, so edge cases/errors aren't covered. This adds 96 unit tests at 100% coverage, uses shared Rust types directly, and keeps everything in one

Summary and Recommendations

The open PR portfolio is unchanged since the previous report, with all 12 pull requests maintaining their existing states. This is the second consecutive day with zero net movement, suggesting a quiet period across all repositories. No new PRs have been opened, none have been merged or closed, and no review activity has occurred on any existing PR. The following analysis identifies the key trends and actionable items.

Active Review Cycle

QwenLM/qwen-code#2838 (Bun runtime support) remains the sole PR in an active review cycle. The author pushed Round 2 fixes on May 14, 2026, addressing all outstanding comments from maintainer wenshao. Seven days have passed since the last author push with no maintainer response. The PR has 3,434 additions across 6 files, making it the largest open PR by volume. The mergeable_state remains "blocked," likely due to required CI checks or branch protection rules. While this PR is not yet concerning, another week without maintainer engagement would shift it into a "needs attention" category.

Recently Active PRs (1-9 Days)

Six PRs have been updated within the past 9 days. All of these are in personal repositories (pcc, adapt, gemini-cli) except for **anomalyco/opencode#25355**. All personal-repo PRs have received only bot reviews from the Gemini Code Assist integration, with zero human maintainer engagement. The bot has provided actionable feedback on most of these PRs, including critical and medium-priority review comments on **pcc#10** (7 review comments, 1,695 additions) and **adapt#1** (5 review comments, 239 additions). Since these are personal repos, the author can address bot feedback and self-merge at their discretion. The **opencode#25355** PR resolved its issue-linking requirement but has received no human review.

Stale PRs (22-68 Days)

Five PRs are classified as stale, ranging from 22 to 68 days without update. **microsoft/node-pty#901** at 68 days is the longest-standing stale PR, with only a CLA request comment and no maintainer review of any kind. This PR is effectively stalled indefinitely unless a maintainer picks it up. **charmbracelet/glow#937** at 24 days is a minimal 3-line fix that has received zero activity from anyone. **clockworklabs/SpacetimeDB#4773** at 22 days had a productive maintainer question about the PR's purpose, which the author answered, but no follow-up has occurred in three weeks. **euxaristia/VoxelPopuli#2** at 28 days and **euxaristia/tree-sitter#1** at 36 days are in personal repositories with only bot reviews. These can be addressed independently.

Recommendations

No PRs require immediate author action. The portfolio is stable. The primary recommendation remains: consider pinging maintainers on stale external-repo PRs (node-pty at 68 days, glow at 24 days, SpacetimeDB at 22 days) to determine whether they are still interested. For personal-repo PRs with bot feedback, the author should decide whether to address the issues and self-merge, or close them if no longer relevant. The qwen-code PR should be monitored for maintainer response; if no reply is received by May 28 (two weeks after the last author push), a polite follow-up comment would be appropriate.
