Changes Since Last Report

New PRs (1)

One new pull request was opened since the previous report on May 19, 2026. **google-gemini/gemini-cli#26498** ("feat(cli): show acknowledgment when user steering hint is processed") was opened on May 20, 2026 but was closed without merge later the same day. No new PRs remain open that were not present in the previous report.

Closed PRs (1)

google-gemini/gemini-cli#26498 was closed without being merged on May 20, 2026. This PR had been open since May 9, 2026 and had received 8 bot reviews from the Gemini Code Assist bot. The PR was labeled "pr-nudge-sent" and received a maintainer response on May 13, 2026. The closure without merge suggests the feature was either rejected, superseded, or the approach did not align with the project direction.

PR Overview

The following table summarizes all 12 currently open pull requests. PRs are sorted by most recently updated. The "State" column reflects the actual status determined by cross-referencing reviews, follow-up commits, and maintainer activity, not just surface-level metadata.

Detailed PR Analysis

[Reviewed] euxaristia/pcc#10: feat: add builtin linker and integrate into compiler pipeline

Created: May 19, 2026 | Updated: May 19, 2026 | Draft: False | Mergeable: True | +1695/-432 in 4 files

CI: PENDING

[Reviewed] euxaristia/adapt#4: feat(flatpak): run flatpak update on all upgrade paths

Created: May 17, 2026 | Updated: May 17, 2026 | Draft: False | Mergeable: True | +6/-1 in 1 files

CI: PENDING

[In Review Cycle] QwenLM/qwen-code#2838: feat: add bun runtime support

Created: April 02, 2026 | Updated: May 14, 2026 | Draft: False | Mergeable: True | +3434/-6 in 6 files

CI: PENDING

Reviews:

[CHANGES_REQUESTED] wenshao (April 24, 2026)

[CHANGES_REQUESTED] wenshao (April 24, 2026): The added `bun.lock` appears to be generated from stale or incomplete manifests. For example, it records `@lydell/node-pty` packages as `1.1.0` while the current manifests and npm lock use `1.2.0-beta.10`; workspace versions are also stale (`0.13.2` vs current `0.15.2`), channel workspace dependenci

Conversation:

DennisYu07 (April 03, 2026): Hi @euxaristia, thank you for your contribution! bun support is on our roadmap as a next-step feature. We'll conduct a thorough design review before merging this PR, so we'll need some additional time to evaluate it properly.
euxaristia (April 24, 2026): Ok I will fix these issues soon, my CachyOS bricked itself so I need some time to reinstall. I should be able to address the requested changes in a week or less.

euxaristia (April 24, 2026): Thanks for the thorough review, @wenshao. My machine is finally back, so I just pushed a rebased version that addresses most of the comments. Summary: | Comment | Fix | |---|---| | Root `version` / `sandboxImageUri` rolled back | Rebased onto current `main` (0.15.2 preserved). | | `package-lock.json`

euxaristia (May 14, 2026): Thanks for the thorough reviews, @wenshao. I've pushed a new commit that addresses all outstanding comments: ****Round 2 fixes:**** | Comment | Fix | |---|---| | `bun.lock` stale versions (`@lydell/node-pty` 1.1.0, workspace 0.13.2, missing channels, wrong `react-devtools-core`) | Regenerated `bun.loc

Notable Feedback:

wenshao: ****[Critical]**** This rolls the root package version back to `0.13.2` while the base branch is already newer. The root version is used for `CLI\_VERSION` and embedded into the bundle, so this would ship/

wenshao: ****[Critical]**** `package.json` changes dependency versions, but `package-lock.json` was not updated. `npm ci` fails with lockfile mismatch errors for changed dependencies such as `cross-env`, `react-de

wenshao: **[Critical]** Changing the published CLI shebang to `#!/usr/bin/env bun` makes the installed `qwen` binary require Bun on `PATH`. That breaks existing Node-only installations even though the package [Author pushed follow-up commits after receiving reviews.](#)

[Reviewed] [euxaristia/adapt#1](#): Add shell completion for zsh and bash

Created: May 09, 2026 | Updated: May 12, 2026 | Draft: False | Mergeable: True | +239/-0 in 3 files

CI: PENDING

euxaristia (April 10, 2026): @codex review

chatgpt-codex-connector[bot] (April 10, 2026): You have reached your Codex usage limits for code reviews. You can see your limits in the [Codex usage dashboard](https://chatgpt.com/codex/cloud/settings/usage).

bfops (April 27, 2026): Hi @euxaristia, what's the goal of this PR? Why is this version preferable to what's there? Is it intended as a replacement?

euxaristia (April 28, 2026): @bfops rewrites the C++ binding layer in Rust. The C++ side has integration tests (type-isolation, client-comparison) but zero unit tests on the internal logic, so edge cases/errors aren't covered. This adds 96 unit tests at 100% coverage, uses shared Rust types directly, and keeps everything in one

Summary and Recommendations

The open PR portfolio remains stable at 12 pull requests, with no critical blockers detected. The following key observations and recommendations are provided based on the current state of each PR.

Active Review Cycle

QwenLM/qwen-code#2838 (Bun runtime support) is the only PR currently in an active review cycle. Two rounds of changes have been requested by maintainer wenshao, and the author has pushed fixes for both. The PR is in a healthy state with active engagement from both sides. The mergeable_state is "blocked" likely due to required status checks or branch protection rules. No action is needed from the author at this time; the ball is in the maintainer's court for the next review round.

Recently Active PRs (1-9 days)

Five PRs have seen activity within the past 9 days. Most of these are in personal repositories (pcc, adapt, gemini-cli) and have only received bot reviews from the Gemini Code Assist integration. These PRs are not stalled but also have no human maintainer engagement yet. The adapt#4 PR is a small, focused change (6 lines) that may be self-mergeable if the repository allows it. The opencode#25355 PR had a brief back-and-forth with the GitHub Actions bot about linking an issue, which was resolved, but no human review has occurred since.

Stale PRs (22-67 days)

Four PRs are classified as stale, with no updates in 22 to 67 days. **microsoft/node-pty#901** is the most concerning at 67 days old with only a CLA request comment and no maintainer review. This PR is effectively

stalled unless a maintainer picks it up for review. **charmbracelet/glow#937** is a minimal 3-line fix at 23 days with zero activity of any kind. **clockworklabs/SpacetimeDB#4773** at 22 days has had a maintainer question about the PR's goal, which the author answered, but no follow-up from the maintainer. **euxaristia/VoxelPopuli#2** at 28 days and **euxaristia/tree-sitter#1** at 36 days are in personal repos with only bot reviews. These can be self-managed at the author's discretion.

Recommendations

No PRs require immediate author action. The primary recommendation is to consider pinging maintainers on the stale PRs in external repositories (node-pty, glow, SpacetimeDB) to check if they are still interested in reviewing. For personal repository PRs with bot reviews only, the author should decide whether to address the bot feedback and self-merge, or close them if they are no longer relevant. The qwen-code PR should continue to be monitored for the next maintainer response.
