Overview

No net change in open PR count since the last report on May 21. 1 PR is in an active review cycle awaiting maintainer re-review, 2 has been recently updated, 4 are waiting for maintainer attention, 3 are aging (14-30 days without activity), and 2 have gone stale (30+ days). Zero PRs have been merged, closed, or newly opened in this reporting period.

Key Findings

QwenLM/qwen-code#2838 remains the most active PR. After two rounds of changes requested by maintainers, the author pushed a fix commit on May 14 addressing all review feedback. It has been 8 days since that push with no maintainer re-review. This PR carries +3,434 lines across 6 files and is the largest contribution currently open. The last maintainer comment was on April 24, and the author has been responsive throughout the review cycle.

microsoft/node-pty#901 has crossed the 69-day threshold with zero maintainer engagement beyond the initial CLA request. The PR fixes a Windows and Unix resize error bug (+8/-2 lines) and has had no reviews, no review comments, and no maintainer comments since the CLA bot message. This PR is effectively stalled unless the author follows up on the CLA or a maintainer picks it up.

euxaristia/adapt#4 is actively being developed. Originally a small grammar fix, it has been expanded to include Flatpak and Snap upgrade paths (+56/-2 lines across 3 files). A maintainer review was submitted on May 17, and the author pushed a follow-up commit on May 20 addressing the feedback. This is in a healthy review cycle.

clockworklabs/SpacetimeDB#4773 received a maintainer question on April 28 asking about the PR's goals and why this FFI approach is preferable to alternatives. The author has not yet responded. CI is passing. At 41 days old, this PR risks going stale without a timely response to the maintainer's inquiry.

anomalyco/opencode#25355 had a brief interaction with an automated LLM-based review bot that identified a potential issue. After the author's update, the bot confirmed the PR now meets contributing guidelines. However, no human maintainer has reviewed this 20-day-old PR with +192/-192 lines across 20 files.

Detailed PR Analysis

● euxaristia/pcc#10 — feat: add builtin linker and integrate into compiler pipeline

Active (recent) · Created May 19, 2026 (2d ago) · +1695 / -432 (4 files) · Draft: No · Mergeable: True

CI: pending

Review by gemini-code-assist[bot] (Commented) on May 19, 2026: ## Code Review This pull request introduces a basic linker and an ELF reader while rewriting the ELF generator to suppo...

■ No activity for 69 days. Consider following up or closing.

Recommended Actions

■ [QwenLM/qwen-code#2838](#)

Consider a polite ping on the PR or in the project's discussion channel. It has been 8 days since the author addressed all review feedback with no maintainer re-response. The author has been highly responsive and the ball is in the maintainer's court.

■ [microsoft/node-pty#901](#)

At 69 days, this PR needs action. The CLA must be signed before any review can proceed. If the CLA is complete, a comment confirming that would be appropriate. Otherwise, this may need to be closed and resubmitted.

■ [clockworklabs/SpacetimeDB#4773](#)

Respond to maintainer bfops's question about the PR's goals. At 41 days old with an unanswered maintainer inquiry, this PR is at risk of being forgotten. A timely, detailed response is critical.

■ [charmbracelet/ghglow#937](#)

At 25 days with zero maintainer engagement, this minimal fix (+3 lines) may benefit from a brief comment asking about review timeline or whether the approach aligns with the project's direction.
